Important Public Announcement

Starting in late May, early June, The Norfolk County Mosquito Control District will begin conducting ULV aerosol applications in the evening, **not** in the early morning as in past years. In the town of Avon applications will be conducted on Wednesday evenings commencing after sunset. These applications will continue to be conducted with the same product as in past years – one that presents a miniscule risk to human health and the environment.

[“EPA’s October 2011 Pyrethrins/Pyrethroid Cumulative Risk Assessment indicates that exposures from the many current uses of pyrethrins and pyrethroid insecticides do not pose risk concerns for children or adults.”]

David Lawson, Director of the Norfolk County Mosquito Control District, says that

“The decision to move to an evening spray schedule is driven by science. Mosquito biology and weather conditions, taken together, indicate that the use of an evening application will be the most effective at controlling nuisance and disease carrying mosquitoes and therefore the best use of our resources.”

Residents will continue to be able to find out if their street is being sprayed, by entering their address on an interactive map on the NCMCD website http://www.norfolkcountymosquito.org/ULV_Schedule.html or by calling (617) 582-6216 after 3:30 each afternoon.
