

**TOWN OF AVON
WATER DEPARTMENT**

SAVE ENERGY & WATER

To help the Homeowners of Avon reduce their energy and WATER costs, as well as conserve our water supply, we bring this to your attention.

HOT WATER USE:

In the morning, or during the day, when the Hot Water faucet is turned on, and must run quite a bit before the water is hot, if possible, we suggest the Hot water line from the heating source, generally a tank, be insulated. This is a simple process in that foam tubing is slipped onto the pipe to keep the water hot up close to the faucet.

This insulating can be done easily by Homeowners but for those unable to do it a Plumber or Handyman can do the installation.

It is our feeling that this will be beneficial to Homeowners and recommend your serious consideration of this suggestion
